INSTALLING THE APP

NoteAdventure on iPhone and iPad

Four steps to put NoteAdventure™ on your iPhone or iPad, and how to keep it up to date.

Not in the App Store? That's expected.

NoteAdventure is still being tested, so **searching the App Store for NoteAdventure finds nothing**. You install it through TestFlight instead.

TestFlight is Apple's own free app for trying out apps before they are released. You get it from the App Store like any other app, and it takes care of installing and updating NoteAdventure for you.

1 Get TestFlight

Open the App Store and search for **TestFlight**. It is free, from Apple. Tap **Get**.

2 Open the invite link

On the iPhone or iPad itself, open this link (no invitation email needed):

https://testflight.apple.com/join/ppX6FF9K

3 Accept, then Install

TestFlight opens and shows NoteAdventure. Tap **Accept**, then **Install**. The app lands on your home screen. From then on, open NoteAdventure from its icon there, not from TestFlight.

4 Tap your email link, then sign in

New here? Tap the link in your studio's invitation email (a teacher: the setup email) to set up your account. After that, open NoteAdventure and sign in.

Getting updates

TestFlight tells you when a new version is ready. To always have the newest one, turn on **Automatic Updates**: open TestFlight, tap NoteAdventure, and switch on Automatic Updates. Or tap **Update** when it appears.

Spotted something odd?

Take a screenshot as usual. iPhone offers **Share Beta Feedback**: tap it, add a few words, and send. It comes straight to us with the picture.

If the app stops opening

Each test version expires after 90 days. Open TestFlight and install the newest version. Your practice is kept on our servers, so nothing is lost.

If TestFlight shows no version available, email us.

Stuck, or something not working? Email **issues-na@sniffsafarilabs.com**. A real person reads every one.
